

EdgeOS — New features guide

The architectural items from bugfixes01.pdf (14 pages) · built 7 October 2026

Before you use these on the live site: apply database update

0083_project_type_services_raci_nesting.sql on Supabase. Until it is applied, the app keeps working, but three things are not saved: the *Type of project*, the *Product / Service* choice, and a RACI task linked to a deliverable. When that happens the app shows a message saying it needs update 0083. Updates 0078, 0081 and 0082 are still pending on live too. Several of these features use them.

Contents

#	Feature	Where
1	Type of project (Waterfall / Agile / Hybrid)	Projects › New project
2	SKU tab with Product or Service	Inside a project › SKU
3	Pin projects and move them up and down	Projects list
4	Team Members “Details” panel	Project › Team › Team Members
5	Removed members move to Inactive (bug fix)	Project › Team › Team Members
6	Deliverables with their sub-tasks, and “+” on sub-tasks	Project › Team › Team Hierarchy
7	Add Row: Deliverable Task, and “Link to a Deliverable”	Project › Team › Team Hierarchy
8	Click a team member to see their RACI	Team Hierarchy (both views)
9	A vendor on many projects (“Add” next to Belongs to)	Business › Vendor Directory
10	“Also on these projects” with Remove from project	Project › Vendor › Vendor Directory

Two other items on the architectural list, the bulk-upload check against current employees only and “Add New Department”, were built in a parallel session. They are summarised at the end.

1. Type of project

Every new project now records how it is run.

How to use it

1. Go to **Projects** and click **New project**.
2. Under the project name, find **Type of project** and pick one of the three options:
 - **Waterfall Method**: a linear and sequential approach (e.g. Construction, Manufacturing, Healthcare, Retail).
 - **Agile Method**: a flexible, iterative approach (e.g. Software, Banking, Finance, Marketing).
 - **Hybrid Method**: a combination of both. *Not sure? Go with Hybrid.*
3. Fill in the rest and click **Create project**. A new project can't be saved without a type.

Example: a manufacturing project for a client is *Client › Manufacturing › Waterfall*; a software app is *Client › Software App › Agile*.

Where it shows

- In the project's header, next to the client and manager (e.g. "Waterfall method").
- On the Projects list, as the optional column **Type of project**. Turn it on from the table's **Columns** menu.
- The old "Type" switch (For a client / Internal) is now labelled **Client or internal** so the two can't be confused.

Projects made before this change have no type and can still be edited and saved as before.

2. SKU tab with Product or Service

The project's 5th tab is now called **SKU**. Its page, **SKUs**, lists only the products and services that belong to that project. For example, QAZ appears in Luxe, Kottivakkam and XYZ appears in Software, as long as each is set to belong to that project.

How to use it

1. Open a project and click **SKU** in the left rail.
2. Click **New SKU**. *Belongs to* is already set to this project.
3. At the top of the form, choose **Product** or **Service**.
 - **Product** shows the same form as before: Name, Belongs to, SKU code, Category, Description, Unit price, Unit, **HSN code**, Tax rate and optional stock tracking.
 - **Service** shows only: Name, Belongs to, SKU code, Category, Description, **SAC code** and Tax rate.
4. Click **Add product** or **Add service**.

Good to know

- Each card shows a **Product** or **Service** tag, with **HSN** or **SAC** before its code.
- The new **Products & services** filter narrows the list to products only or services only.
- The same form and filter are on the company-wide **Product & Service Directory**. A product is put on a project from either place, through *Belongs to*.
- Services have no price field, as the bug list asked, so a service starts at 0 when it is put on a quotation or invoice. Enter the rate on the document line.

3. Pin projects and move them up and down

How to use it

1. Go to **Projects** (List view). Each row starts with a **pin** button.
2. Click the pin to keep that project at the top of the list. Click it again to unpin it.
3. Pinned projects show **up** and **down** arrows. Use them to put the pinned projects in the order you want.

Good to know

- Pins are personal: each person has their own pins and order, kept in that browser for that company. This is the same way the dashboard widget layout is kept. Clearing browser data or switching computers starts with no pins.
- Filters still apply: a pinned project that doesn't match the filters is hidden, and pinned projects that do match stay on top.

- The numbers next to Open / Active / Planned / On hold / All have been removed, as the bug list asked.

4. Team Members “Details” panel

The **Change %** and **Remove** buttons at the end of each row are replaced by one **Details** button.

What the Details panel holds

- **Department:** from the person’s employee record. Read-only here; change it on the employee.
- **On the project since:** the start date.
- **Project role:** Manager, Lead, Member or **Custom**. Custom lets you type a role such as Site Engineer or Architect.
- **Time on project (%):** their share of working time, from 1 to 100.
- **Status:** Active or Inactive.
- **Remove** and **Delete** buttons at the bottom.

How to use it

1. Open the project › **Team** › **Team Members** and click **Details** on a person’s row.
2. Change the role, time or status, then click **Save**.
 - Setting **Inactive** takes the person off the project. This is the same as Remove.
 - Setting an inactive person back to **Active** puts them on the project again from today. Their earlier time stays on record and is listed in the panel.
3. **Remove** ends their time on the project now and moves them to *Inactive*. Their dates and hours stay on record.
4. **Delete** erases every membership they have had on this project, including the dates, so their past time no longer counts toward the project’s labour cost. Use it only for someone added by mistake. Remove is the safe choice.

5. Removed members now move to Inactive (bug fix)

What was wrong: Remove set the person’s end date to *today*. A membership counts through its last day, so the person stayed under *Current* as “Leaving” until midnight. That is what happened with sai.cherju@gmail.com.

What happens now: Remove ends the membership *yesterday*, so the person moves to **Inactive** straight away. Someone added today, or due to start later, has no history yet, so Remove deletes their membership entirely.

A person removed before this fix moves to Inactive on its own the next day. To move them now, open **Details** and click **Remove** again.

6. Deliverables with their sub-tasks, and “+” on sub-tasks

In **Team Hierarchy** › **Who does what**, the RACI matrix is now an outline. Each **Deliverable** row (Design & approvals, Civil works, MEP, Finishing, Handover...) lists its WBS sub-tasks underneath it, indented: Drawings and Permits under Design & approvals, Site preparation, Foundations and Structure under Civil works, and so on.

How to use it

1. Rows added with **Add N from the plan** are now created as **Deliverables**, one for each top-level item of the project's Tasks (WBS). Rows added from the plan before this change are treated the same way.
2. Each sub-task shows its own row of cells marked **+**. Click a **+** (or focus it and press R, A, C or I) to give that person a letter on that sub-task. The sub-task's RACI row is created on its first letter.
3. Use the arrow at the start of a deliverable row to hide or show what is under it.
4. **Export** (Excel or CSV) keeps the outline, with sub-tasks indented under their deliverable.

Sub-tasks come from the project's Tasks (WBS) page. Add or rename them there, and the matrix follows.

7. Add Row: Deliverable | Task, and “Link to a Deliverable”

How to use it

1. In Team Hierarchy, click **Add row. Type** now offers **Deliverable | Task**, in that order. Milestone has been removed.
2. **Deliverable**: give it a name. Optionally choose **Link to a WBS deliverable**, and its WBS sub-tasks will be listed under it. Choosing one fills in the name.
3. **Task**: give it a name, then choose **Link to a Deliverable**. The list shows **Not linked**, every deliverable of the WBS (Design & Approvals, Civil works, MEP, Finishing, Handover...) and any deliverable rows made by hand.
 - **Linked**: the task is listed under that deliverable. If the deliverable had no row on the matrix yet, one is added for it.
 - **Not linked**: the task is a separate row on its own.

Removing a deliverable row also removes the tasks linked to it. WBS sub-tasks stay listed, without their letters. Milestone rows made earlier still show and work.

8. Click a team member to see their RACI

How to use it

1. In Team Hierarchy, switch to **Reporting structure** and click a person's name (e.g. Sai or Sai Krishna). You can also click a name at the top of a column in **Who does what**.
2. A window lists what that person holds, one line per letter. For example, for Sai:

R Responsible	Design & Approval
A Accountable	Civil Works MEP
C Consulted	Handover
I Informed	Finishing

9. A vendor on many projects

How to use it

1. Go to **Business > Vendor Directory** and click **New vendor**, or choose **Edit** on a vendor.
2. Set **Belongs to** as before: Others, Internal or a project.
3. Click **Add** next to it to put the vendor on another project. A new project picker appears below. Click Add again for as many projects as needed. **Remove** next to a picker takes that project

off.

4. Click **Save changes**. The vendor appears in the Vendor Directory of every chosen project. A project taken out of the form no longer lists the vendor.

In the list, the Belongs to column shows the first project and "+N more projects". The line "A project's vendors also show in that project's Vendor Directory." has been removed.

10. "Also on these projects" with Remove from project

How to use it

1. Open a project › **Vendor** › **Vendor Directory** and click a vendor.
2. The vendor's window has a new section, **ALSO ON THESE PROJECTS**, that lists every other project the vendor is on.
3. Click **Remove from project** next to one of them and confirm. Only that project's link is removed: the vendor stays in your vendors, on this project, and keeps its bills.

Done in the parallel session

- **Bulk upload check:** during an employee bulk upload, emails are checked against current employees, not ex-employees. A matching ex-employee is treated as someone rejoining.
- **Add New Department:** a button next to *Department* on the New employee form opens the departments panel, where a department can be added without leaving the form.

Department colours: the colour picked when adding a department isn't saved anywhere, because the departments table stores only the name. Colours shown are worked out from the name. Saving a colour would need its own small database change.

Checks run

All 599 automated app tests pass (new tests cover project pins and the RACI outline), and the production build succeeds. The database tests pass against a local copy of the database, including a new test for update 0083 (10 checks), and 0083 can safely be run twice. The only failures are two older purchase-invoice checks (tests 03 and 04), which come from migration 0028, not this work. These features have **not** been clicked through on the live site, because update 0083 isn't applied there yet.
